CORE SKILLS

JavaScript / TS

React

Node.js / Express

REST API

HTML5 / CSS3

PostgreSQL

TOOLS & TECHNOLOGY

Git / GitHub

Docker

Java (Spring)

Python

AI & LLM

Jira / Confluence

SonarQube

LANGUAGES

Ukrainian — Native
English — B1
Spanish — A2

EDUCATION

Odesa Polytechnic National University
2017–2022
Computer Science & Software Engineering — Java, OOP, data structures, algorithms, SQL, Git, software design fundamentals.

STEP IT Academy
Sep 2015–Feb 2016
Java Development — fundamentals, OOP, algorithms, data structures.

Serhii Malyskevych

Full Stack Developer (React / Node)

Frontend ↔ Backend

Balanced full stack focus

React · Node · SQL

Core production stack

Docker-ready

Containerized services

PROFILE

Full stack developer with a balanced foundation across the React/TypeScript front end and Node.js/Express, Java (Spring), and SQL on the back end. Comfortable designing REST APIs, modeling data in PostgreSQL, and containerizing services with Docker, while also building responsive, accessible interfaces. Experienced with Git-based team workflows and AI-assisted development — able to read, evaluate, and adapt generated code with a clear grasp of the underlying implementation.

EXPERIENCE

Junior Engineer — LLM Voice & SMS Agent

Freelance (Fiverr) · Remote

- Supported development and configuration of an LLM-based agent handling incoming calls and SMS, including backend logic for dialogue flow and escalation.
- Built and integrated data-processing routines connecting intent recognition, context handling, and automated escalation to a live operator.
- Collaborated with a distributed technical team using Git; reviewed and adjusted AI-generated backend logic for correctness and maintainability.

Dialogue Logic

Intent Recognition

Git

Personal & Educational Projects — Full Stack Development

Self-directed

- Built full stack web applications pairing React/TypeScript front ends with Node.js/Express APIs and PostgreSQL data stores.
- Designed and consumed REST APIs, handled DOM manipulation, event handling, and asynchronous JavaScript on the client.
- Containerized services with Docker and used SQL/SQLite for local data persistence during development.
