CORE SKILLS

Python · Django · JavaScript / TS · React · Node.js / Express · REST API · PostgreSQL · HTML5 / CSS3

AUTOMATION & BOTS

Selenium · Playwright · BeautifulSoup · Scrapy · Telegram Bot API · Webhooks

TOOLS & TECHNOLOGY

Git / GitHub · Docker · GitHub Actions · Java (Spring) · AI & LLM · Jira / Confluence · SonarQube

LANGUAGES

Ukrainian — Native
English — B1
Spanish — A2

EDUCATION

Odesa Polytechnic National University
2017–2022
Computer Science & Software Engineering — Java, OOP, data structures, algorithms, SQL, Git, software design fundamentals.

STEP IT Academy
Sep 2015 – Feb 2016
Java Development — fundamentals, OOP, algorithms, data structures.

Serhii Malyskevych

Full Stack Developer (Python / JavaScript)

Python ↔ JavaScript
Both sides of the stack

Automation & bots
Scrapers, APIs, integrations

Docker-ready
Containerized services

PROFILE

Full stack developer: Python on the back end and in automation, React and TypeScript on the front end. I design REST APIs, model data in PostgreSQL and containerize services with Docker. I automate what people do by hand — scrapers for collecting and processing data, bots and integrations with external services. Experienced with Git-based team workflows and AI-assisted development: able to read, evaluate and adapt generated code with a clear grasp of the underlying implementation.

EXPERIENCE

Developer — AI assistant for technique analysis

Own R&D · Remote

- Built an AI assistant that breaks down a figure-skating jump from video: frame-by-frame skeleton tracking, measurement of revolutions in the air and identification of the jump type.
- Implemented explainable output — every conclusion carries the chain of cues behind it, a confidence level and the frames it was derived from.
- Handled uncertainty properly: when the camera angle cannot separate a Lutz from a Flip by the blade edge, the assistant answers “not determinable” instead of guessing.
- The logic was implemented and verified in full on the demo version; rollout into a product was not carried out.

Python · Computer Vision · Pose Estimation · Video Analysis

Engineer — LLM Voice & SMS Agent

Freelance (Fiverr) · Remote · Jan 2026 – Jul 2026

- Supported development and configuration of an LLM-based agent handling incoming calls and SMS, including backend logic for dialogue flow and escalation.
- Built and integrated data-processing routines connecting intent recognition, context handling and automated escalation to a live operator.
- Collaborated with a distributed technical team using Git; reviewed and adjusted AI-generated backend logic for correctness and maintainability.

Python · LLM / AI tools · REST API · Git

Personal & Educational Projects — Full Stack Development

Self-directed

- Built full stack web applications pairing React/TypeScript front ends with Node.js/Express APIs and PostgreSQL data stores.
- Designed and consumed REST APIs, handled DOM manipulation, event handling and asynchronous JavaScript on the client.
- Containerized services with Docker and used SQL/SQLite for local data persistence during development.

React · Node.js · Express · PostgreSQL · Docker
