FRONTEND

React · Next.js · TypeScript · JavaScript (ES6+) · HTML5 / CSS3 · Tailwind CSS · shadcn/ui · React Hook Form · Zod

BACKEND

Node.js / Express · REST API · MongoDB / Mongoose · PostgreSQL · JWT auth

TOOLS & TECHNOLOGY

Git / GitHub · Docker · Vercel · GitHub Actions · ESLint / Prettier · AI & LLM · Jira / Confluence · SonarQube

LANGUAGES

Ukrainian — Native
English — B1
Spanish — A2

EDUCATION

Odesa Polytechnic National University
2017–2022
Computer Science & Software Engineering — Java, OOP, data structures, algorithms, SQL, Git, software design fundamentals.

STEP IT Academy
Sep 2015 – Feb 2016
Java Development — fundamentals, OOP, algorithms, data structures.

Serhii Malyskevych

Frontend Developer (React / Next.js)

React + TypeScript
Typed, validated UIs

Next.js full stack
REST API, MongoDB, JWT

Ship-ready
Docker, Vercel

PROFILE

Frontend developer focused on React, Next.js and TypeScript, with hands-on backend experience in Node.js, REST APIs and MongoDB / PostgreSQL. I build typed, validated interfaces — from form-heavy admin panels to public pages — with the API and data layer behind them.

EXPERIENCE & PROJECTS

Frontend Developer — Form Builder

Test assignment · Oct 2026 · Live demo · GitHub

- Built a Next.js / React / TypeScript form builder: admin CRUD, an editor with live preview and a field settings sidebar, public forms with a confirmation modal.
- Shared Zod schemas between the API, the editor and AI output; public forms build validation at runtime from field settings (required, length, min / max / step).
- Backend on Next.js Route Handlers with MongoDB / Mongoose and JWT auth in httpOnly cookies; the session is checked on every admin page and endpoint.
- Added an AI assistant (LangChain.js + OpenAI) that edits fields from chat; packaged with Docker Compose and deployed to Vercel.

Next.js · React · TypeScript · Tailwind CSS · shadcn/ui · Zod · MongoDB · Docker

Engineer — LLM Voice & SMS Agent

Freelance (Fiverr) · Remote · Jan 2026 – Jul 2026

- Supported development and configuration of an LLM-based agent handling incoming calls and SMS, including backend logic for dialogue flow and escalation.
- Built and integrated data-processing routines connecting intent recognition, context handling and automated escalation to a live operator.
- Collaborated with a distributed technical team using Git; reviewed and adjusted AI-generated backend logic for correctness and maintainability.

LLM / AI tools · REST API · Git

Personal & Educational Projects — Full Stack Development

Self-directed

- Built full stack web applications with React / TypeScript front ends, Node.js / Express APIs and PostgreSQL data stores.
- Designed and consumed REST APIs; handled DOM manipulation, events and asynchronous JavaScript on the client; containerized services with Docker.

React · Node.js · Express · PostgreSQL · Docker

Developer — AI assistant for technique analysis

Own R&D · Remote · demo version

- Built an AI assistant that analyzes a figure-skating jump from video: frame-by-frame skeleton tracking, rotation measurement and jump type identification.
- Designed explainable output: every conclusion lists its cues, confidence level and source frames, and the assistant answers “not determinable” instead of guessing.

Computer Vision · Pose Estimation · Video Analysis
